

# Online Book Store Analytics

Final Business Insights Report

**Project:** Online Book Store Analytics Using SQL

**Tools Used:** MySQL, SQL

**Database:** Online Book Store

**Objective:** Analyze sales, customers, inventory & product performance to support data-driven business decisions

PREPARED VIA SQL-BASED DATA ANALYSIS • 2026

## Executive Summary

The SQL analysis reveals that the online bookstore has generated **\$75,628.66** in total revenue from **500 orders**, serving **307 unique customers** and selling **2,697 books**. Data quality checks confirmed there are no missing (NULL) values, making the dataset fully reliable for business analysis.

## Key Performance Indicators (KPIs)

500

TOTAL ORDERS

307

TOTAL CUSTOMERS

\$75,628.66

TOTAL REVENUE

2,697

BOOKS SOLD

### Insight

- The business has a healthy sales volume with 500 completed orders.
- More than 300 customers have made purchases.
- Revenue of \$75.6K indicates strong overall business performance.
- Nearly 2,700 books have been sold across all genres.

## Book Performance Analysis

### Top Selling Books

| Book                                   | Revenue (\$) |
|----------------------------------------|--------------|
| Integrated Secondary Access            | 1,104.69     |
| Multi-tiered Responsive Parallelism    | 1,077.12     |
| Switchable Modular Moderation          | 1,047.48     |
| Cross-platform Next Generation Website | 952.98       |
| Grass-roots Systematic Moderator       | 872.29       |

### Business Insight

- A small number of books contribute significantly to overall sales.
- These books should receive higher inventory priority and marketing support.
- They can also be featured in recommendation sections on the online store.

## Customer Analysis

### Top Customers

| Customer            | Country  | Amount Spent (\$) |
|---------------------|----------|-------------------|
| Kim Turner          | Cambodia | 1,398.90          |
| Jonathon Strickland | Dominica | 1,060.95          |
| Carrie Perez        | Hungary  | 1,052.27          |
| Julie Smith         | Vanuatu  | 991.00            |
| Pamela Gordon       | Yemen    | 966.30            |

#### Business Insight

- A few customers generate a disproportionately high share of revenue.
- Introducing loyalty programs or exclusive offers for these customers could improve retention and lifetime value.

## Genre Performance

| Genre           | Books Sold | Revenue (\$) |
|-----------------|------------|--------------|
| Romance         | 439        | 13,086.98    |
| Mystery         | 504        | 12,788.45    |
| Science Fiction | 447        | 11,770.51    |
| Non-Fiction     | 351        | 11,603.06    |
| Fantasy         | 446        | 11,238.38    |
| Biography       | 285        | 7,870.06     |
| Fiction         | 225        | 7,271.22     |

#### Business Insight

- **Romance** 📖 is the highest revenue-generating genre.
- **Mystery** 📖 has the highest number of books sold.
- **Science Fiction** and **Fantasy** are also strong-performing categories.
- **Fiction** ⚠️ has the lowest sales and revenue and may require promotional strategies.

## Author Performance

The author revenue analysis shows that revenue is distributed across many authors rather than concentrated in just a few, indicating a diverse product portfolio. No single author dominates overall sales, reducing dependency on one writer.

### Business Insight

- Continue maintaining a diverse catalog.
- Promote authors with consistently good sales through featured collections and recommendations.

## Monthly Sales Trend

| Month                              | Revenue (\$) | Note                                                                                                    |
|------------------------------------|--------------|---------------------------------------------------------------------------------------------------------|
| May 2023                           | 5,110.81     | Highest month shown  |
| January 2024                       | 4,904.57     | Strong month                                                                                            |
| Various mid-year / year-end months | Lower        | Slower periods       |

### Recommendation

- Plan marketing campaigns before historically slower months.
- Increase promotions during seasonal sales periods.
- Ensure inventory is sufficient before high-revenue months.

## Inventory Analysis

The inventory report highlights several books with 0 to very low stock, indicating they are at risk of stockouts.

### Business Insight

- Immediate restocking is recommended for books with zero stock.
- Best-selling books should maintain higher inventory levels.
- Inventory monitoring should be performed regularly to prevent lost sales.

## Unsold Books

The SQL analysis identified multiple books that have never been purchased. Possible reasons include:

- Low customer awareness
- Poor product visibility
- Ineffective pricing
- Limited demand

### Recommendation

- Offer discounts.
- Bundle with popular books.
- Improve product descriptions.
- Feature them on the homepage.

## Customers Without Purchases

The analysis identified several registered customers who have not placed any orders.

### Recommendation

- Send welcome emails.
- Provide first-order discounts.
- Run re-engagement campaigns.
- Recommend popular books based on browsing behavior.

## Data Quality Assessment

 No NULL values

 Complete dataset

 Consistent relationships between tables

 Suitable for business analysis and reporting

## Business Recommendations

### Sales

- Promote the top-selling books through featured listings.
- Create genre-based promotions for Romance and Mystery.

### Customers

- Launch a loyalty rewards program for high-value customers.
- Encourage inactive customers with personalized offers.

### Inventory

- Restock books with low or zero inventory.
- Reduce inventory of consistently low-performing books.

### Marketing

- Run seasonal campaigns during historically lower-revenue months.
- Use genre-specific marketing to maximize return on investment.

### Business Growth

- Increase investment in high-performing genres.
- Review pricing for low-performing titles.
- Expand the catalog in categories with strong customer demand.

## Conclusion

The SQL analysis demonstrates that the Online Book Store has a strong customer base and healthy revenue generation. **Romance** and **Mystery** genres are the primary contributors to sales, while several books require inventory replenishment or promotional support. The dataset is clean and complete, enabling reliable business analysis. Implementing targeted marketing, loyalty initiatives, and improved inventory management can further increase revenue and customer satisfaction. 🚀
